ClinixSummary
AI-Powered Clinical Documentation

Your Privacy During Your Consultation

Your clinician uses a secure AI assistant to help document your visit.

Here is what you should know:

Recording is used only for your clinical notes

The audio from your consultation is used solely to help create accurate clinical documentation. It is never used for any other purpose.

Your recording is encrypted immediately

From the moment audio capture begins, all data is encrypted using industry-standard AES-256 encryption — the same level used by banks and governments.

Audio is deleted immediately after your note is created

Once your clinical note has been generated, the audio recording is permanently and irrecoverably deleted. No audio is ever stored.

Your data is never shared with third parties

Your consultation data is processed entirely within ClinixSummary's secure infrastructure. It is never sent to external AI services or shared with anyone outside your care team.

Your clinician reviews everything

The AI generates a draft note, but your clinician always reviews and approves the final document before it becomes part of your medical record.

You can opt out at any time

If you prefer that the AI assistant is not used during your consultation, simply let your clinician know. Your care will not be affected in any way.

> *"Your privacy is our priority. This system was designed to help your clinician spend more time with you — not less."*
